Contents

1 Introduction **9**
1.1 Perturbations 11
1.2 Main results 12
1.3 Overview 16

I Linear theory **19**

2 Parabolic regularity **21**
2.1 The parabolic Weyl lemma 23
2.2 The fundamental L^p estimate 32
2.3 Local regularity 33
2.4 Interior estimates 37
2.5 The key product estimate 38
2.6 Parabolic bootstrapping 42

3 The linear heat equation **53**
3.1 Regularity 53
3.2 Apriori estimates 55
3.3 Exponential decay 61
3.4 The Fredholm operator 66

II The boundary value problem in M **73**

4 Solutions of the nonlinear heat equation **75**
4.1 Regularity and compactness 75
4.2 Bounded action and finite energy 81
4.3 An apriori estimate 82
4.4 Gradient bounds 83
4.5 Exponential decay 84
4.6 Compactness up to broken trajectories 89

5 Implicit function theorem **91**

6 Unique Continuation **105**
6.1 Linear equation 106
6.2 Nonlinear equation 108

7 Transversality **113**
7.1 The universal Banach space of perturbations 113
7.2 Admissible perturbations 116
7.3 Surjectivity 119

8 Morse homology I
Moduli spaces **129**
8.1 The unstable manifold theorem 129
8.2 The Morse complex 137

III Forward semiflow on ΛM **141**

9 Semigroup theory **143**
9.1 Resolvents 144
9.2 Sectorial operators 147
9.3 Semigroups 160
9.4 Spectral projections and splittings 167
9.5 Laplacian and Jacobi operator 175

10 Heat semiflow **183**
10.1 Short time existence and uniqueness 185
10.2 Regularity 194
10.3 Global existence and asymptotic behavior 197
10.4 Dependence on initial value 199

11 Local stable foliations **203**
11.1 Technical preliminaries 206
11.2 Local stable manifold theorem 224
11.3 Backward λ-Lemma 241
11.4 Forward λ-Lemma 272

12 Conley theory and stable foliations **273**
12.1 Conley sets and isolating blocks 274
12.2 Stable foliations associated to level sets 278
12.3 Strong deformation retract 284
12.4 Conley pairs 289

13 Morse homology II
Flow lines **297**
13.1 Orientations 301
13.2 Appendix: Geometric Fredholm theory 307

14 Homology of the loop space **313**
14.1 Morse filtration 314
14.2 Cellular and singular homology 325
14.3 Cellular and Morse chain complexes 325
14.4 The natural isomorphism on homology 334

A Exponential map **337**

B Asymptotic limits **343**

C Global stable foliations **345**
