θ

Want to describe an (unpowered) glider.

Coords which describe (almost) everything: θ = angle nose makes with horizontal.

v = forward velocity, ie, in the direction of θ

Restrict to v>0, θ = any

Not describing in x-y coordinates,

Can write equations as

$$\frac{dv}{dt} = -\sin(\theta) - Rv^2 \qquad \frac{d\theta}{dt} = v - \frac{\cos\theta}{v}$$

Remember that v and θ are functions of t, ie θ(t), v(t)

Easy case: R=0.

special solution, θ(t) = 0, v(t) = 1 --- level flight

What happens if θ = 0, but v(t) > 1 (by a little),

initially, v will decrease, θ increase, but then v increases, θ decrease, sinusoidal motion,.

> with(plots) :

> fieldplot([v - cos(theta)/v, -sin(theta)], theta=-Pi..Pi, v=0.1..3, arrows = slim);

Use the DEtools package, use DEplot

> restart;

> with(DEtools) :

> phug := [diff(theta(t), t) = v(t) - $\frac{\cos(\theta(t))}{v(t)}$, diff(v(t), t) = -sin(theta(t)) - R · (v(t))²];

$$phug := \left[\frac{d}{dt} \theta(t) = v(t) - \frac{\cos(\theta(t))}{v(t)}, \frac{d}{dt} v(t) = -\sin(\theta(t)) \right] \quad (2)$$

> R := 0;

$$R := 0$$
