

33. (*expires 4/17*) The message below was encrypted using RSA with a key having the base

$$n = 27606985387162255149739023449107931668458716142620601169954803000803329$$

and the exponent

$$e = 95541407564551142884433930859007846184688349517132011538195190379009$$

The plaintext was represented in printable ASCII (base 128) in blocks of 32 letters at a time, and no padding.

Decrypt the message. (Hint: 70 decimal digits is too small to be secure.) So you don't have to retype everything, the values of n , e , and the encrypted message are in the file [formulacrypt.txt](#).
