

Simons Center for Geometry and Physics

$$T(z) = \varphi_{zz} - \frac{1}{2}\varphi_z^2$$

$$\varphi_{z\bar{z}} = \frac{1}{2}e^\varphi$$

$$\langle e^{\alpha_1\varphi(P_1)} \dots e^{\alpha_n\varphi(P_n)} \rangle_{\mathcal{C}\mathcal{M}_\alpha} = \int e^{-\frac{1}{2\pi\hbar}S_\alpha(\varphi)} \mathcal{D}\varphi$$

Simons Center Workshop
 March 29 – April 2, 2010
 Stony Brook University

Organizers: Nikita Nekrasov, IHES & SCGP
 Leon Takhtajan, Stony Brook University

Thanks to S. Sutherland and F. Smirnov for graphical assistance
