# Contents

<b>Introduction</b>	iii
The subject of the book, Elementary Topology	iii
Organization of the text	iv
For whom is this book?	v
The basic theme	v
Where are the proofs?	vi
Structure of the book	vi
Variations	vii
Additional themes	vii
Advices to the reader	viii
How this book was created	viii
Acknowledgments	xi
<b>Part 1. General Topology</b>	
Chapter I. Structures and Spaces	3
<b>1. Digression on Sets</b>	3
1°1 Sets and Elements	3
1°2 Equality of Sets	4
1°3 The Empty Set	5
1°4 Basic Sets of Numbers	5
1°5 Describing a Set by Listing Its Elements	5
1°6 Subsets	6
1°7 Properties of Inclusion	6
1°8 To Prove Equality of Sets, Prove Two Inclusions	6
1°9 Inclusion Versus Belonging	7
1°10 Defining a Set by a Condition	7

---

1°11	Intersection and Union	7
1°12	Different Differences	9
<b>2.</b>	<b>Topology in a Set</b>	<b>11</b>
2°1	Definition of Topological Space	11
2°2	Simplest Examples	11
2°3	The Most Important Example: Real Line	12
2°4	Additional Examples	12
2°5	Using New Words: Points, Open Sets, Closed Sets	12
2°6	Set-Theoretic Digression: De Morgan Formulas	13
2°7	Properties of Closed Sets	13
2°8	Being Open or Closed	13
2°9	Characterization of Topology in Terms of Closed Sets	14
2°10	Neighborhoods	14
2°11x	Open Sets on Line	14
2°12x	Cantor Set	14
2°13x	Topology and Arithmetic Progressions	15
<b>3.</b>	<b>Bases</b>	<b>16</b>
3°1	Definition of Base	16
3°2	When a Collection of Sets is a Base	16
3°3	Bases for Plane	16
3°4	Subbases	17
3°5	Infiniteness of the Set of Prime Numbers	17
3°6	Hierarchy of Topologies	17
<b>4.</b>	<b>Metric Spaces</b>	<b>18</b>
4°1	Definition and First Examples	18
4°2	Further Examples	18
4°3	Balls and Spheres	19
4°4	Subspaces of a Metric Space	19
4°5	Surprising Balls	20
4°6	Segments (What Is Between)	20
4°7	Bounded Sets and Balls	21
4°8	Norms and Normed Spaces	21
4°9	Metric Topology	21
4°10	Openness and Closedness of Balls and Spheres	22
4°11	Metrizable Topological Spaces	22
4°12	Equivalent Metrics	22
4°13	Operations With Metrics	23
4°14	Distances Between Points and Sets	23
4°15x	Distance Between Sets	24
4°16x	Ultrametries and $p$ -Adic Numbers	24
4°17x	Asymmetries	25

---

<b>5. Subspaces</b>	27
5°1 Topology for a Subset of a Space	27
5°2 Relativity of Openness and Closedness	27
5°3 Agreement on Notation of Topological Spaces	28
<b>6. Position of a Point with Respect to a Set</b>	29
6°1 Interior, Exterior, and Boundary Points	29
6°2 Interior and Exterior	29
6°3 Closure	30
6°4 Closure in Metric Space	30
6°5 Boundary	30
6°6 Closure and Interior with Respect to a Finer Topology	31
6°7 Properties of Interior and Closure	31
6°8 Compositions of Closure and Interior	31
6°9 Sets with Common Boundary	32
6°10 Convexity and Int, Cl, Fr	32
6°11 Characterization of Topology by Closure and Interior Operations	32
6°12 Dense Sets	32
6°13 Nowhere Dense Sets	33
6°14 Limit Points and Isolated Points	33
6°15 Locally Closed Sets	34
<b>7. Ordered Sets</b>	35
7°1 Strict Orders	35
7°2 Nonstrict Orders	35
7°3 Relation between Strict and Nonstrict Orders	36
7°4 Cones	36
7°5 Position of an Element with Respect to a Set	37
7°6 Linear Orders	38
7°7 Topologies Determined by Linear Order	38
7°8 Poset Topology	39
7°9 How to Draw a Poset	40
7°10 Cyclic Orders in Finite Sets	41
7°11x Cyclic Orders in Infinite Sets	42
7°12x Topology of Cyclic Order	43
<b>Proofs and Comments</b>	44
Chapter II. Continuity	53
<b>8. Set-Theoretic Digression: Maps</b>	53
8°1 Maps and Main Classes of Maps	53
8°2 Image and Preimage	54
8°3 Identity and Inclusion	55
8°4 Composition	55

8°5	Inverse and Invertible	55
8°6	Submaps	56
<b>9.</b>	<b>Continuous Maps</b>	<b>57</b>
9°1	Definition and Main Properties of Continuous Maps	57
9°2	Reformulations of Definition	58
9°3	More Examples	58
9°4	Behavior of Dense Sets	58
9°5	Local Continuity	59
9°6	Properties of Continuous Functions	59
9°7	Continuity of Distances	60
9°8	Isometry	60
9°9	Contractive Maps	60
9°10	Sets Defined by Systems of Equations and Inequalities	60
9°11	Set-Theoretic Digression: Covers	61
9°12	Fundamental Covers	61
9°13x	Monotone Maps	62
9°14x	Gromov–Hausdorff Distance	63
9°15x	Functions on the Cantor Set and Square-Filling Curves	63
<b>10.</b>	<b>Homeomorphisms</b>	<b>65</b>
10°1	Definition and Main Properties of Homeomorphisms	65
10°2	Homeomorphic Spaces	65
10°3	Role of Homeomorphisms	65
10°4	More Examples of Homeomorphisms	66
10°5	Examples of Homeomorphic Spaces	67
10°6	Examples of Nonhomeomorphic Spaces	71
10°7	Homeomorphism Problem and Topological Properties	71
10°8	Information: Nonhomeomorphic Spaces	72
10°9	Embeddings	72
10°10	Equivalence of Embeddings	73
	<b>Proofs and Comments</b>	<b>74</b>
Chapter III.	Topological Properties	81
<b>11.</b>	<b>Connectedness</b>	<b>81</b>
11°1	Definitions of Connectedness and First Examples	81
11°2	Connected Sets	81
11°3	Properties of Connected Sets	82
11°4	Connected Components	83
11°5	Totally Disconnected Spaces	83
11°6	Boundary and Connectedness	84
11°7	Connectedness and Continuous Maps	84
11°8	Connectedness on Line	84

---

<b>12. Application of Connectedness</b>	87
12°1 Intermediate Value Theorem and Its Generalizations	87
12°2 Applications to Homeomorphism Problem	87
12°3x Induction on Connectedness	88
12°4x Dividing Pancakes	88
<b>13. Path-Connectedness</b>	90
13°1 Paths	90
13°2 Path-Connected Spaces	91
13°3 Path-Connected Sets	91
13°4 Properties of Path-Connected Sets	91
13°5 Path-Connected Components	92
13°6 Path-Connectedness and Continuous Maps	92
13°7 Path-Connectedness Versus Connectedness	92
13°8x Polygon-Connectedness	93
13°9x Connectedness of Some Sets of Matrices	94
<b>14. Separation Axioms</b>	95
14°1 The Hausdorff Axiom	95
14°2 Limits of Sequence	96
14°3 Coincidence Set and Fixed Point Set	96
14°4 Hereditary Properties	96
14°5 The First Separation Axiom	97
14°6 The Kolmogorov Axiom	98
14°7 The Third Separation Axiom	98
14°8 The Fourth Separation Axiom	99
14°9x Niemytski's Space	100
14°10x Urysohn Lemma and Tietze Theorem	100
<b>15. Countability Axioms</b>	102
15°1 Set-Theoretic Digression: Countability	102
15°2 Second Countability and Separability	103
15°3 Bases at a Point	104
15°4 First Countability	104
15°5 Sequential Approach to Topology	104
15°6 Sequential Continuity	105
15°7x Embedding and Metrization Theorems	106
<b>16. Compactness</b>	107
16°1 Definition of Compactness	107
16°2 Terminology Remarks	107
16°3 Compactness in Terms of Closed Sets	108
16°4 Compact Sets	108
16°5 Compact Sets Versus Closed Sets	108
16°6 Compactness and Separation Axioms	109

16°7	Compactness in Euclidean Space	109
16°8	Compactness and Continuous Maps	110
16°9	Closed Maps	111
16°10x	Norms in $\mathbb{R}^n$	111
16°11x	Induction on Compactness	111
<b>17.</b>	<b>Sequential Compactness</b>	<b>112</b>
17°1	Sequential Compactness Versus Compactness	112
17°2	In Metric Space	112
17°3	Completeness and Compactness	113
17°4x	Noncompact Balls in Infinite Dimension	113
17°5x	$p$ -Adic Numbers	114
17°6x	Spaces of Convex Figures	114
<b>18x.</b>	<b>Local Compactness and Paracompactness</b>	<b>116</b>
18°1x	Local Compactness	116
18°2x	One-Point Compactification	116
18°3x	Proper Maps	117
18°4x	Locally Finite Collections of Subsets	118
18°5x	Paracompact Spaces	118
18°6x	Paracompactness and Separation Axioms	119
18°7x	Partitions of Unity	119
18°8x	Application: Making Embeddings From Pieces	120
	<b>Proofs and Comments</b>	<b>121</b>
Chapter IV.	Topological Constructions	135
<b>19.</b>	<b>Multiplication</b>	<b>135</b>
19°1	Set-Theoretic Digression: Product of Sets	135
19°2	Graphs	136
19°3	Product of Topologies	136
19°4	Topological Properties of Projections and Fibers	137
19°5	Cartesian Products of Maps	137
19°6	Properties of Diagonal and Other Graphs	138
19°7	Topological Properties of Products	139
19°8	Representation of Special Spaces as Products	140
<b>20.</b>	<b>Quotient Spaces</b>	<b>141</b>
20°1	Set-Theoretic Digression: Partitions and Equivalence Relations	141
20°2	Quotient Topology	142
20°3	Topological Properties of Quotient Spaces	142
20°4	Set-Theoretic Digression: Quotients and Maps	143
20°5	Continuity of Quotient Maps	143
20°6x	Closed Partitions	144

20°7x	Open Partitions	144
<b>21.</b>	<b>Zoo of Quotient Spaces</b>	<b>145</b>
21°1	Tool for Identifying a Quotient Space with a Known Space	145
21°2	Tools for Describing Partitions	145
21°3	Welcome to the Zoo	146
21°4	Transitivity of Factorization	147
21°5	Möbius Strip	148
21°6	Contracting Subsets	148
21°7	Further Examples	149
21°8	Klein Bottle	149
21°9	Projective Plane	150
21°10	You May Have Been Provoked to Perform an Illegal Operation	150
21°11	Set-Theoretic Digression: Sums of Sets	150
21°12	Sums of Spaces	151
21°13	Attaching Space	151
21°14	Basic Surfaces	152
<b>22.</b>	<b>Projective Spaces</b>	<b>155</b>
22°1	Real Projective Space of Dimension $n$	155
22°2x	Complex Projective Space of Dimension $n$	156
22°3x	Quaternionic Projective Spaces	157
<b>23x.</b>	<b>Finite Topological Spaces</b>	<b>159</b>
23°1x	Set-Theoretic Digression: Splitting a Transitive Relation Into Equivalence and Partial Order	159
23°2x	The Structure of Finite Topological Spaces	160
23°3x	Simplicial schemes	161
23°4x	Barycentric Subdivision of a Poset	161
<b>24x.</b>	<b>Spaces of Continuous Maps</b>	<b>163</b>
24°1x	Sets of Continuous Mappings	163
24°2x	Topologies on Set of Continuous Mappings	163
24°3x	Topological Properties of Mapping Spaces	164
24°4x	Metric Case	164
24°5x	Interactions With Other Constructions	165
24°6x	Mappings $X \times Y \rightarrow Z$ and $X \rightarrow \mathcal{C}(Y, Z)$	166
	<b>Proofs and Comments</b>	<b>168</b>
Chapter V.	Topological Algebra	179
<b>25x.</b>	<b>Digression. Generalities on Groups</b>	<b>181</b>
25°1x	The Notion of Group	181

25°2x	Additive Versus Multiplicative	182
25°3x	Homomorphisms	183
25°4x	Subgroups	184
<b>26x.</b>	<b>Topological Groups</b>	186
26°1x	Notion of Topological Group	186
26°2x	Examples of Topological Groups	186
26°3x	Translations and Conjugations	187
26°4x	Neighborhoods	187
26°5x	Separation Axioms	188
26°6x	Countability Axioms	188
<b>27x.</b>	<b>Constructions</b>	190
27°1x	Subgroups	190
27°2x	Normal Subgroups	191
27°3x	Homomorphisms	192
27°4x	Local Isomorphisms	192
27°5x	Direct Products	193
27°6x	Groups of Homeomorphisms	194
<b>28x.</b>	<b>Actions of Topological Groups</b>	195
28°1x	Action of a Group on a Set	195
28°2x	Continuous Action	196
28°3x	Orbit Spaces	197
28°4x	Homogeneous Spaces	197
	<b>Proofs and Comments</b>	199
<b>Part 2. Elements of Algebraic Topology</b>		
Chapter VI.	Fundamental Group	207
<b>29.</b>	<b>Homotopy</b>	207
29°1	Continuous Deformations of Maps	207
29°2	Homotopy as Map and Family of Maps	208
29°3	Homotopy as Relation	208
29°4	Rectilinear Homotopy	209
29°5	Maps to Star-Shaped Sets	209
29°6	Maps of Star-Shaped Sets	209
29°7	Easy Homotopies	210
29°8	Two Natural Properties of Homotopies	210
29°9	Stationary Homotopy	210
29°10	Homotopies and Paths	211
29°11	Homotopy of Paths	211
<b>30.</b>	<b>Homotopy Properties of Path Multiplication</b>	212
30°1	Multiplication of Homotopy Classes of Paths	212

30°2	Associativity	212
30°3	Unit	213
30°4	Inverse	214
<b>31.</b>	<b>Fundamental Group</b>	215
31°1	Definition of Fundamental Group	215
31°2	Why Index 1?	215
31°3	Circular loops	215
31°4	The Very First Calculations	216
31°5	Fundamental Group of Product	217
31°6	Simply-Connectedness	217
31°7x	Fundamental Group of a Topological Group	218
31°8x	High Homotopy Groups	219
<b>32.</b>	<b>The Role of Base Point</b>	220
32°1	Overview of the Role of Base Point	220
32°2	Definition of Translation Maps	220
32°3	Properties of $T_s$	221
32°4	Role of Path	221
32°5x	In Topological Group	222
32°6x	In High Homotopy Groups	222
	<b>Proofs and Comments</b>	223
Chapter VII. Covering Spaces and Calculation of Fundamental Groups		231
<b>33.</b>	<b>Covering Spaces</b>	231
33°1	Definition of Covering	231
33°2	More Examples	232
33°3	Local Homeomorphisms versus Coverings	233
33°4	Number of Sheets	233
33°5	Universal Coverings	234
<b>34.</b>	<b>Theorems on Path Lifting</b>	235
34°1	Lifting	235
34°2	Path Lifting	235
34°3	Homotopy Lifting	236
<b>35.</b>	<b>Calculation of Fundamental Groups Using Universal Coverings</b>	237
35°1	Fundamental Group of Circle	237
35°2	Fundamental Group of Projective Space	237
35°3	Fundamental Group of Bouquet of Circles	238
35°4	Algebraic Digression: Free Groups	238
35°5	Universal Covering for Bouquet of Circles	240
35°6	Fundamental Groups of Finite Topological Spaces	241
	<b>Proofs and Comments</b>	242

Chapter VIII. Fundamental Group and Maps	247
<b>36. Induced Homomorphisms     and Their First Applications</b>	247
36°1 Homomorphisms Induced by a Continuous Map	247
36°2 Fundamental Theorem of Algebra	248
36°3x Generalization of Intermediate Value Theorem	249
36°4x Winding Number	250
36°5x Borsuk–Ulam Theorem	252
<b>37. Retractions and Fixed Points</b>	253
37°1 Retractions and Retracts	253
37°2 Fundamental Group and Retractions	254
37°3 Fixed-Point Property	254
<b>38. Homotopy Equivalences</b>	256
38°1 Homotopy Equivalence as Map	256
38°2 Homotopy Equivalence as Relation	256
38°3 Deformation Retraction	256
38°4 Examples	257
38°5 Deformation Retraction versus Homotopy Equivalence	258
38°6 Contractible Spaces	258
38°7 Fundamental Group and Homotopy Equivalences	259
<b>39. Covering Spaces via Fundamental Groups</b>	261
39°1 Homomorphisms Induced by Covering Projections	261
39°2 Number of Sheets	261
39°3 Hierarchy of Coverings	262
39°4x Existence of Subordinations	263
39°5x Micro Simply Connected Spaces	263
39°6x Existence of Coverings	264
39°7x Action of Fundamental Group on Fiber	265
39°8x Automorphisms of Covering	265
39°9x Regular Coverings	266
39°10x Lifting and Covering Maps	267
39°11x Induced Coverings	267
39°12x High-Dimensional Homotopy Groups of Covering Space	268
<b>Proofs and Comments</b>	269
Chapter IX. Cellular Techniques	279
<b>40. Cellular Spaces</b>	279
40°1 Definition of Cellular Spaces	279
40°2 First Examples	282
40°3 Further Two-Dimensional Examples	283
40°4 Embedding to Euclidean Space	284

40°5x	Simplicial Spaces	285
40°6x	Topological Properties of Cellular Spaces	285
<b>41.</b>	<b>Cellular Constructions</b>	<b>287</b>
41°1	Euler Characteristic	287
41°2	Collapse and Generalized Collapse	287
41°3x	Homotopy Equivalences of Cellular Spaces	288
<b>42.</b>	<b>One-Dimensional Cellular Spaces</b>	<b>290</b>
42°1	Homotopy Classification	290
42°2	Spanning Trees	291
42°3x	Dividing Cells	291
42°4x	Trees and Forests	291
42°5x	Simple Paths	292
<b>43.</b>	<b>Fundamental Group of a Cellular Space</b>	<b>294</b>
43°1	One-Dimensional Cellular Spaces	294
43°2	Generators	294
43°3	Relations	294
43°4	Writing Down Generators and Relations	296
43°5	Fundamental Groups of Basic Surfaces	296
43°6x	Seifert–van Kampen Theorem	297
43°7x	Group-Theoretic Digression: Amalgamated Product of Groups	299
43°8x	Addendum to Seifert–van Kampen Theorem	301
	<b>Proofs and Comments</b>	<b>303</b>
 <b>Part 3. Topological Manifolds</b>		
Chapter X.	Manifolds	319
<b>44.</b>	<b>Locally Euclidean Spaces</b>	<b>319</b>
44°1	Definition of Locally Euclidean Space	319
44°2	Dimension	320
44°3	Interior and Boundary	321
<b>45.</b>	<b>Manifolds</b>	<b>323</b>
45°1	Definition of Manifold	323
45°2	Components of Manifold	323
45°3	Making New Manifolds out of Old Ones	324
45°4	Double	324
45°5x	Collars and Bites	325
<b>46.</b>	<b>Isotopy</b>	<b>326</b>
46°1	Isotopy of Homeomorphisms	326
46°2	Isotopy of Embeddings and Sets	326
46°3	Isotopies and Attaching	328

46°4	Connected Sums	328
	<b>Proofs and Comments</b>	329
Chapter XI.	Classifications in Low Dimensions	331
<b>47.</b>	<b>One-Dimensional Manifolds</b>	331
47°1	Zero-Dimensional Manifolds	331
47°2	Reduction to Connected Manifolds	332
47°3	Examples	332
47°4	How to Distinguish Them From Each Other?	332
47°5	Statements of Main Theorems	332
47°6	Lemma on 1-Manifold Covered with Two Lines	333
47°7	Without Boundary	333
47°8	With Boundary	334
47°9	Corollaries of Classification	334
47°10	Orientations of 1-manifolds	334
47°11	Mapping Class Groups	335
<b>48.</b>	<b>Two-Dimensional Manifolds: General Picture</b>	336
48°1	Examples	336
48°2x	Ends and Odds	336
48°3	Closed Surfaces	338
48°4	Compact Surfaces with Boundary	338
<b>49.</b>	<b>Triangulations</b>	340
49°1	Triangulations of Surfaces	340
49°2	Triangulation as cellular decomposition	340
49°3	Two Properties of Triangulations of Surfaces	340
49°4x	Scheme of Triangulation	341
49°5	Examples	342
49°6	Subdivision of a Triangulation	342
49°7	Homotopy Type of Compact Surface with Non-Empty Boundary	344
49°8	Triangulations in dimension one	345
49°9	Triangulations in higher dimensions	345
<b>50.</b>	<b>Handle Decomposition</b>	346
50°1	Handles and Their Anatomy	346
50°2	Handle Decomposition of Manifold	346
50°3	Handle Decomposition and Triangulation	347
50°4	Regular Neighborhoods	348
50°5	Cutting 2-Manifold Along a Curve	348
50°6	Orientations	350
<b>51.</b>	<b>Topological Classification of Compact Triangulated 2-Manifolds</b>	352

51°1	Spines and Their Regular Neighborhoods	352
51°2	Simply connected compact 2-manifolds	352
51°3	Splitting off crosscaps and handles	352
51°4	Splitting of a Handle on a Non-Orientable 2-Manifold	353
51°5	Final Formulations	353
<b>52.</b>	<b>Cellular Approach to Topological Classification of Compact surfaces</b>	<b>355</b>
52°1	Families of Polygons	355
52°2	Operations on Family of Polygons	356
52°3	Topological and Homotopy Classification of Closed Surfaces	357
<b>53.</b>	<b>Recognizing Closed Surfaces</b>	<b>358</b>
53°1	Orientations	358
53°2	More About Recognizing Closed Surfaces	359
53°3	Recognizing Compact Surfaces with Boundary	359
53°4x	Simply Connected Surfaces	359
	<b>Proofs and Comments</b>	<b>360</b>
Chapter XII.	Surfaces Beyond Classification	361
<b>54.</b>	<b>Curves and Graphs on Surfaces</b>	<b>362</b>
54°1	Genus of Surface	362
54°2x	Polygonal Jordan, Schönflies and Annulus Theorems	363
54°3x	Planarity of Graphs	363
<b>55x.</b>	<b>Coverings and Branched Coverings</b>	<b>365</b>
55°1x	Finite Coverings of Closed Surfaces	365
55°2x	Branched Coverings	367
	<b>Proofs and Comments</b>	<b>368</b>
Chapter XIII.	One-Dimensional Homology	369
<b>56x.</b>	<b>One-Dimensional Homology and Cohomology</b>	<b>369</b>
56°1x	Why and What for	369
56°2x	One-Dimensional Integer Homology	370
56°3x	Null-Homologous Loops and Disks with Handles	370
56°4x	Description of $H_1(X)$ in Terms of Free Circular Loops	371
56°5x	Homology and Continuous Maps	372
56°6x	One-Dimensional Cohomology	373
56°7x	Integer Cohomology and Maps to $S^1$	373
56°8x	One-Dimensional Homology Modulo 2	374
<b>57.</b>	<b>One-Dimensional mod2-Homology of Surfaces</b>	<b>376</b>
57°1	Polygonal Paths on Surface	376
57°2	Bringing Loops to General Position	376
