$$4.21682866691290 - 0.934399508040875 x \quad (10)$$

We know how to write functions one way:

```
> f := (x,y) -> 3*x^2 + 2*y;  
f := (x, y) \rightarrow 3 x^2 + 2 y \quad (11)
```

```
> f(3,2); \quad 31 \quad (12)
```

```
> f(apple, rabbit); \quad 3 \text{ apple}^2 + 2 \text{ rabbit} \quad (13)
```

```
> f(3);  
Error, invalid input: f uses a 2nd argument, y, which is missing
```

Here's another, equivalent.

New lines with shift-enter.

```
> g:= proc(x,y)
  a:=3*x^2;
  b:=2*y;
  return(a+b);
end;
Warning, `a` is implicitly declared local to procedure `g`
Warning, `b` is implicitly declared local to procedure `g`
g := proc(x,y) local a, b; a := 3 * x^2; b := 2 * y; return a + b end proc
